Estimating Amounts for Mulch:

Multiply the width of area in feet, by the length of area in feet to get square footage. Multiply square footage of area by the number of inches deep you would like the mulch. Divide that total by 315 to get the APPROXIMATE total of cubic yards needed. If you are doing several areas, do each one separately. Then add your total of cubic yards together to get the total

Estimating Amounts for Gravel:

Multiply the width of area in feet, by the length of area in feet to get square footage. Multiply square footage of area by the number of inches deep you would like the gravel. Divide that total by 270 to get the APPROXIMATE total of tractor buckets needed. If you are doing several areas, do each one separately. Then add your total of tractor buckets together to get the total needed for the job.
